# Oracle Primavera P6 Professional Project Management (PPM)

Oracle Primavera P6 Professional, the recognised standard for high-performance project management software, is designed to handle large-scale, highly sophisticated and multifaceted projects with ease, allowing you to organise projects with an unlimited number of activities, resources and target plans. P6 PPM is a Windows-based software, which connects either to a server-based or local database, either as a stand-alone solution or as part of an enterprise implementation.

Overview

P6 Professional enables you to budget, prioritise, plan, administer and manage multiple projects within one enterprise; optimize limited and shared resources; and control changes to the project plan. The tool supports work breakdown structures (WBS), organizational breakdown structures (OBS), user-defined fields and codes, critical-path-method (CPM) scheduling, and resource levelling. It provides customisable interfaces, scalable and flexible tools, and easy integration with project management software outside of the P6 suite, including Oracle Contractor, Microsoft Project, and Microsoft Excel.
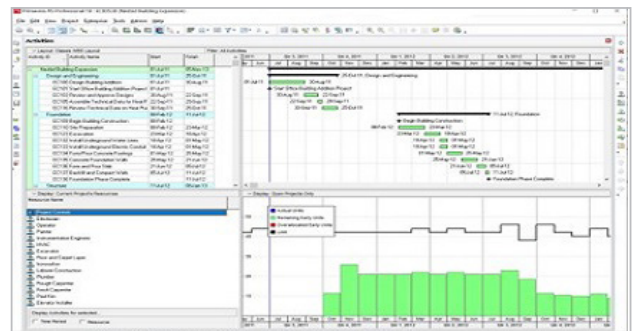

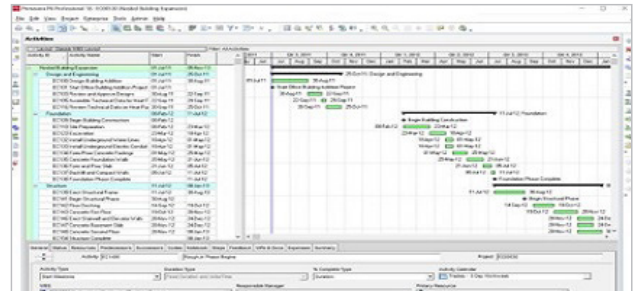

Team Member is an additional component which uses mobile interfaces such as phones or tablets to provide a quick, convenient, and easy way to update project status.

With clear project controls data at your fingertips, you will confidently and consistently bring projects to completion both on-time and on-budget.

If you need your solution to include web-based access consider Oracle Primavera P6 EPPM instead: all the features and benefits of P6 PPM, with the added benefits from hosting on the Oracle cloud or another non-Oracle hosted platform.

Features

- Flexible and customisable user interface
- Streamlined enterprise reporting
- Integrated risk management
- Resource management and optimization views
- Risk management
- Advanced scheduling solutions
- Critical path schedule planning
- Budgeting and budget tracking
- Team member interfaces for gathering status updates
- On-premise install using client server or local database

Benefits

- Fully customisable for a bespoke solution
- Manage complex projects throughout their entire lifecycle
- Manage project portfolios
- Increased visibility of activity and progress
- Confident management of project risks
- Perform resource and cost management
- Track and evaluate planned vs actual costs

- Analyse project performance
- Advanced and customisable reports allow for improved collaboration and decision making
- Easy integration with project management software outside of the P6 suite, including Oracle Contractor, Microsoft Project, and Microsoft Excel
- On-premise install offers faster updating than when working on remote server
