

# Oracle's Primavera Unifier

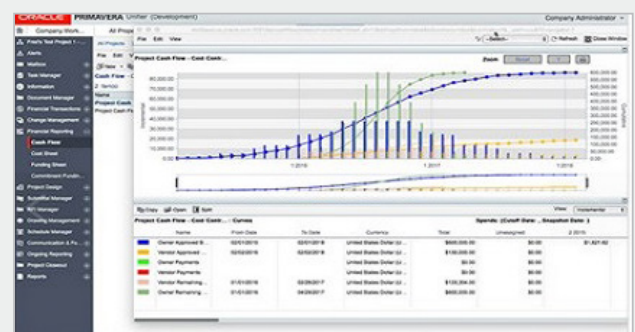

Oracle's Primavera Unifier is the best-in-class when it comes to project lifecycle management solutions. For capital planning, project delivery, cost control and facilities and real estate management, you can rely on Unifier for governance across all project phases, from planning and building to operations and maintenance. It includes workflow, business rules and earned value, along with management functionalities for cost and function, document control, and contract and change, giving you real-time visibility across projects and enabling you to make fast, accurate and cost-effective decisions.

## Overview

Straight out of the box, Oracle's Primavera Unifier is simple to deploy and use, but its real strength is in its ability to meet your own specific needs, with the option to create custom functionalities to accommodate bespoke business processes executed within the project controls function. This is done without the need to write any code, by building your own functionality and using workflow and form configuration. The solution can be deployed on-premise or in the cloud, such as via the Oracle Primavera SaaS option.

Oracle's Primavera Unifier enables you to automate, track and manage budgets, commitments, spends, forecasts and business processes within your organisation and across the supply chain, including design co-ordination, field engineering, construction administration and more. You will be able to maintain up-to-date logs of all RFIs, transmittals and submittals and manage project documentation with check in / check out features, revision control, online mark-up and commenting, and detailed audit logs.

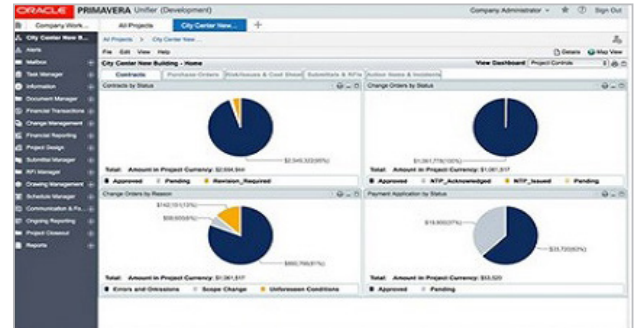

Including Oracle Primavera Unifier Schedule Manager, Document Manager, Phase Gates, and Alerts modules, Unifier offers a full project cost-control solution.

## Features

- Can be deployed on-premise or in the cloud
- Best-in-class cost control, project delivery and management capabilities
- Real-time visibility across projects
- Easy monitoring, visualisation and adjustment of plans based on financial forecasts
- Multi-level hierarchies to model programmes, portfolios, facilities and assets
- Completely integrated and user-friendly collaboration
- Simple to deploy and use
- Accelerators offer quick-start solution design
- Top down and bottom up cash flow models
- Supports multiple time-phased baselines, actuals and forecasts at summary or cost code level
- Advanced cash flow forecasting and earned value management
- Bid and procurement management
- Contract and schedule management
- Design and construction coordination
- Project collaboration
- Phase gate management, fund management and document management
- Multi-scenario planning

- Flexible timescales
- Fully configurable dashboards and user-defined reports

No.	Submittal Title	Submittal Type	Submittal Status	Assignee
003	Formwork Certification	Post-Construction	Pending	
002	Formwork Design Letter	Pre-Construction	Pending	OOTB Admin
001	Slab Formwork Drawings	Pre-Construction	Pending	OOTB Admin

## Benefits

- Quickly and confidently determine which projects will be sanctioned and how money will be assigned
- Assess project health at a glance with clear dashboard reporting
- View baseline spreads against actuals and forecast to keep track of progress, changes and trends
- Monitor all submittals and responsibilities to keep your projects on track at all times
- Keep all your project controls requirements under one software solution, with no need to implement another specialist software product
- Automating processes across the enterprise saves time and money and minimises error, replacing manual

processes with confidential, web-based access for internal and external users

- Full change management functionality within the contract management function gives total visibility into risks, trends and other change-initiating information
- Detailed cash-flow calculations can be performed at project, contract or cost-code level
