

Oracle Primavera Education Series

Course Title	Oracle Primavera Cloud Administration
Course Code	C201
Course Duration	1 day
Course Delivery	Classroom or Online
Course Audience	System Administrators
Prerequisite(s)	Assumes basic awareness of intended project structures and usage
Courseware Author	RPCuk

Course Summary

Learn how to administer the Oracle Primavera Cloud instance, including the processes of maintaining global data and user access. This course includes the setup of workspaces, which form the overall structure of the database, dictionaries that define different workspace-specific data objects, and defaults and options for global settings.

Furthermore, you will learn how to make the most of the functions that are part of the security concept, including users, user groups and permission sets.

i Features

- Administer Oracle Primavera Cloud
- Maintain global data
- Understand user access
- Set up workspaces
- Create dictionaries
