

Oracle Primavera Education Series

Course Title	Oracle Primavera Cloud Lean
Course Code	C203
Course Duration	½ day
Course Delivery	Classroom or Online
Course Audience	Schedulers, Last Planner
Prerequisite(s)	C202
Courseware Author	RPCuk

Course Summary

Learn how to operate the concept of Lean Scheduling in this half day course. The Lean app is based on the Last Planner method. It comprises a Kanban-style task management with an open collaboration with external stakeholders. Tasks can be handled on a graphical surface, updating status or giving additional information to each task. A comprehensive user authorization concept ensures that each user can exactly see and handle the tasks and related information that he is supposed to. Through a dedicated workflow, hand-offs between tasks can be organized. During execution of the project or initiative, the status of each task is transparently tracked and reasons for non-compliance with planned progress are documented.

Features

- Operate Lean Scheduling
- Handle tasks, updating their status or adding information
- Organize workflow and handoffs
- Track and document status and progress of tasks

Course Objectives

- Understand task management
- Collaborate with external stakeholders
- Achieve clear tracking and documentation of progress
- Use graphical methods to handle tasks
- Understand comprehensive user authorization

Course Topics

- Planning tasks
- Integration with waterfall schedule
- Tracking progress
- Handoffs
- Task reporting
- Dashboard reporting
