

# Oracle Primavera Education Series

<b>Course Title</b>	Oracle Primavera Cloud Mobile
<b>Course Code</b>	C205
<b>Course Duration</b>	½ day
<b>Course Delivery</b>	Classroom or Online
<b>Course Audience</b>	Any OPC Team Member
<b>Prerequisite(s)</b>	C202
<b>Courseware Author</b>	RPCuk

## Course Summary

Learn how to monitor your project when onsite with Oracle Primavera Cloud Mobile. In the Project App, the project manager can get a comprehensive overview of the work plan, and the status and progress of all activities and tasks in the schedule.

This includes access to related files and discussions within the project team. When no internet connectivity is available, it is also possible to make updates offline and synchronize them with the cloud as soon as the mobile device is online again.

You will also learn how to maintain progress from your mobile device, using the Progress App, which allows the user to view and update activities and tasks they are assigned to. Linked to these tasks and activities, issues and documents can be viewed, updated and commented. The discussion feature enables users to exchange information and opinions within the project team.

As with the Project app, when no internet connectivity is available, it is also possible to make updates offline and synchronize them with the cloud as soon as the mobile device is online again.

## i Features

- Monitor your project when on-site and maintain progress
- Access files and discussions within the project team
- Work effectively while off-line and synchronize with the cloud when your mobile device is online again
- View and update activities and tasks from a mobile device
- Use the discussion feature to exchange information within the project team
- Make updates when off-line

## Course Objectives

- Monitor and update your project when onsite
